

Case ID: AE-2025-001

Patient Information: 54-year-old female

Suspected Drug: DrugX 50mg daily for hypertension

Concomitant Medications: Metformin for diabetes, Aspirin 75mg daily

Adverse Events: Severe headache, dizziness, nausea

Seriousness Criteria: Hospitalization

Outcome: Recovered after discontinuation of DrugX

Reporter: Dr. John Smith, Cardiology Department, City Hospital

Date Reported: 15-Jan-2025

Narrative:

The patient reported experiencing severe headache and dizziness within two days of starting DrugX 50mg daily. Symptoms persisted and worsened, leading to hospitalization on 14-Jan-2025. Concomitant medications included Metformin for diabetes and Aspirin 75mg daily for cardiac protection. DrugX was discontinued during hospital stay, after which the patient recovered fully. The case was reported by Dr. John Smith on 15-Jan-2025.
